

# Mobile Networks Update: Brazil (June 2017)

Six months have passed since OpenSignal published its last [State of Mobile Networks: Brazil](#) report, so it's time for our semi-annual update on 3G and 4G performance in the region. For our Mobile Networks Update we've taken a snapshot of the mobile market in Brazil, tracking changes in any of our key metrics.

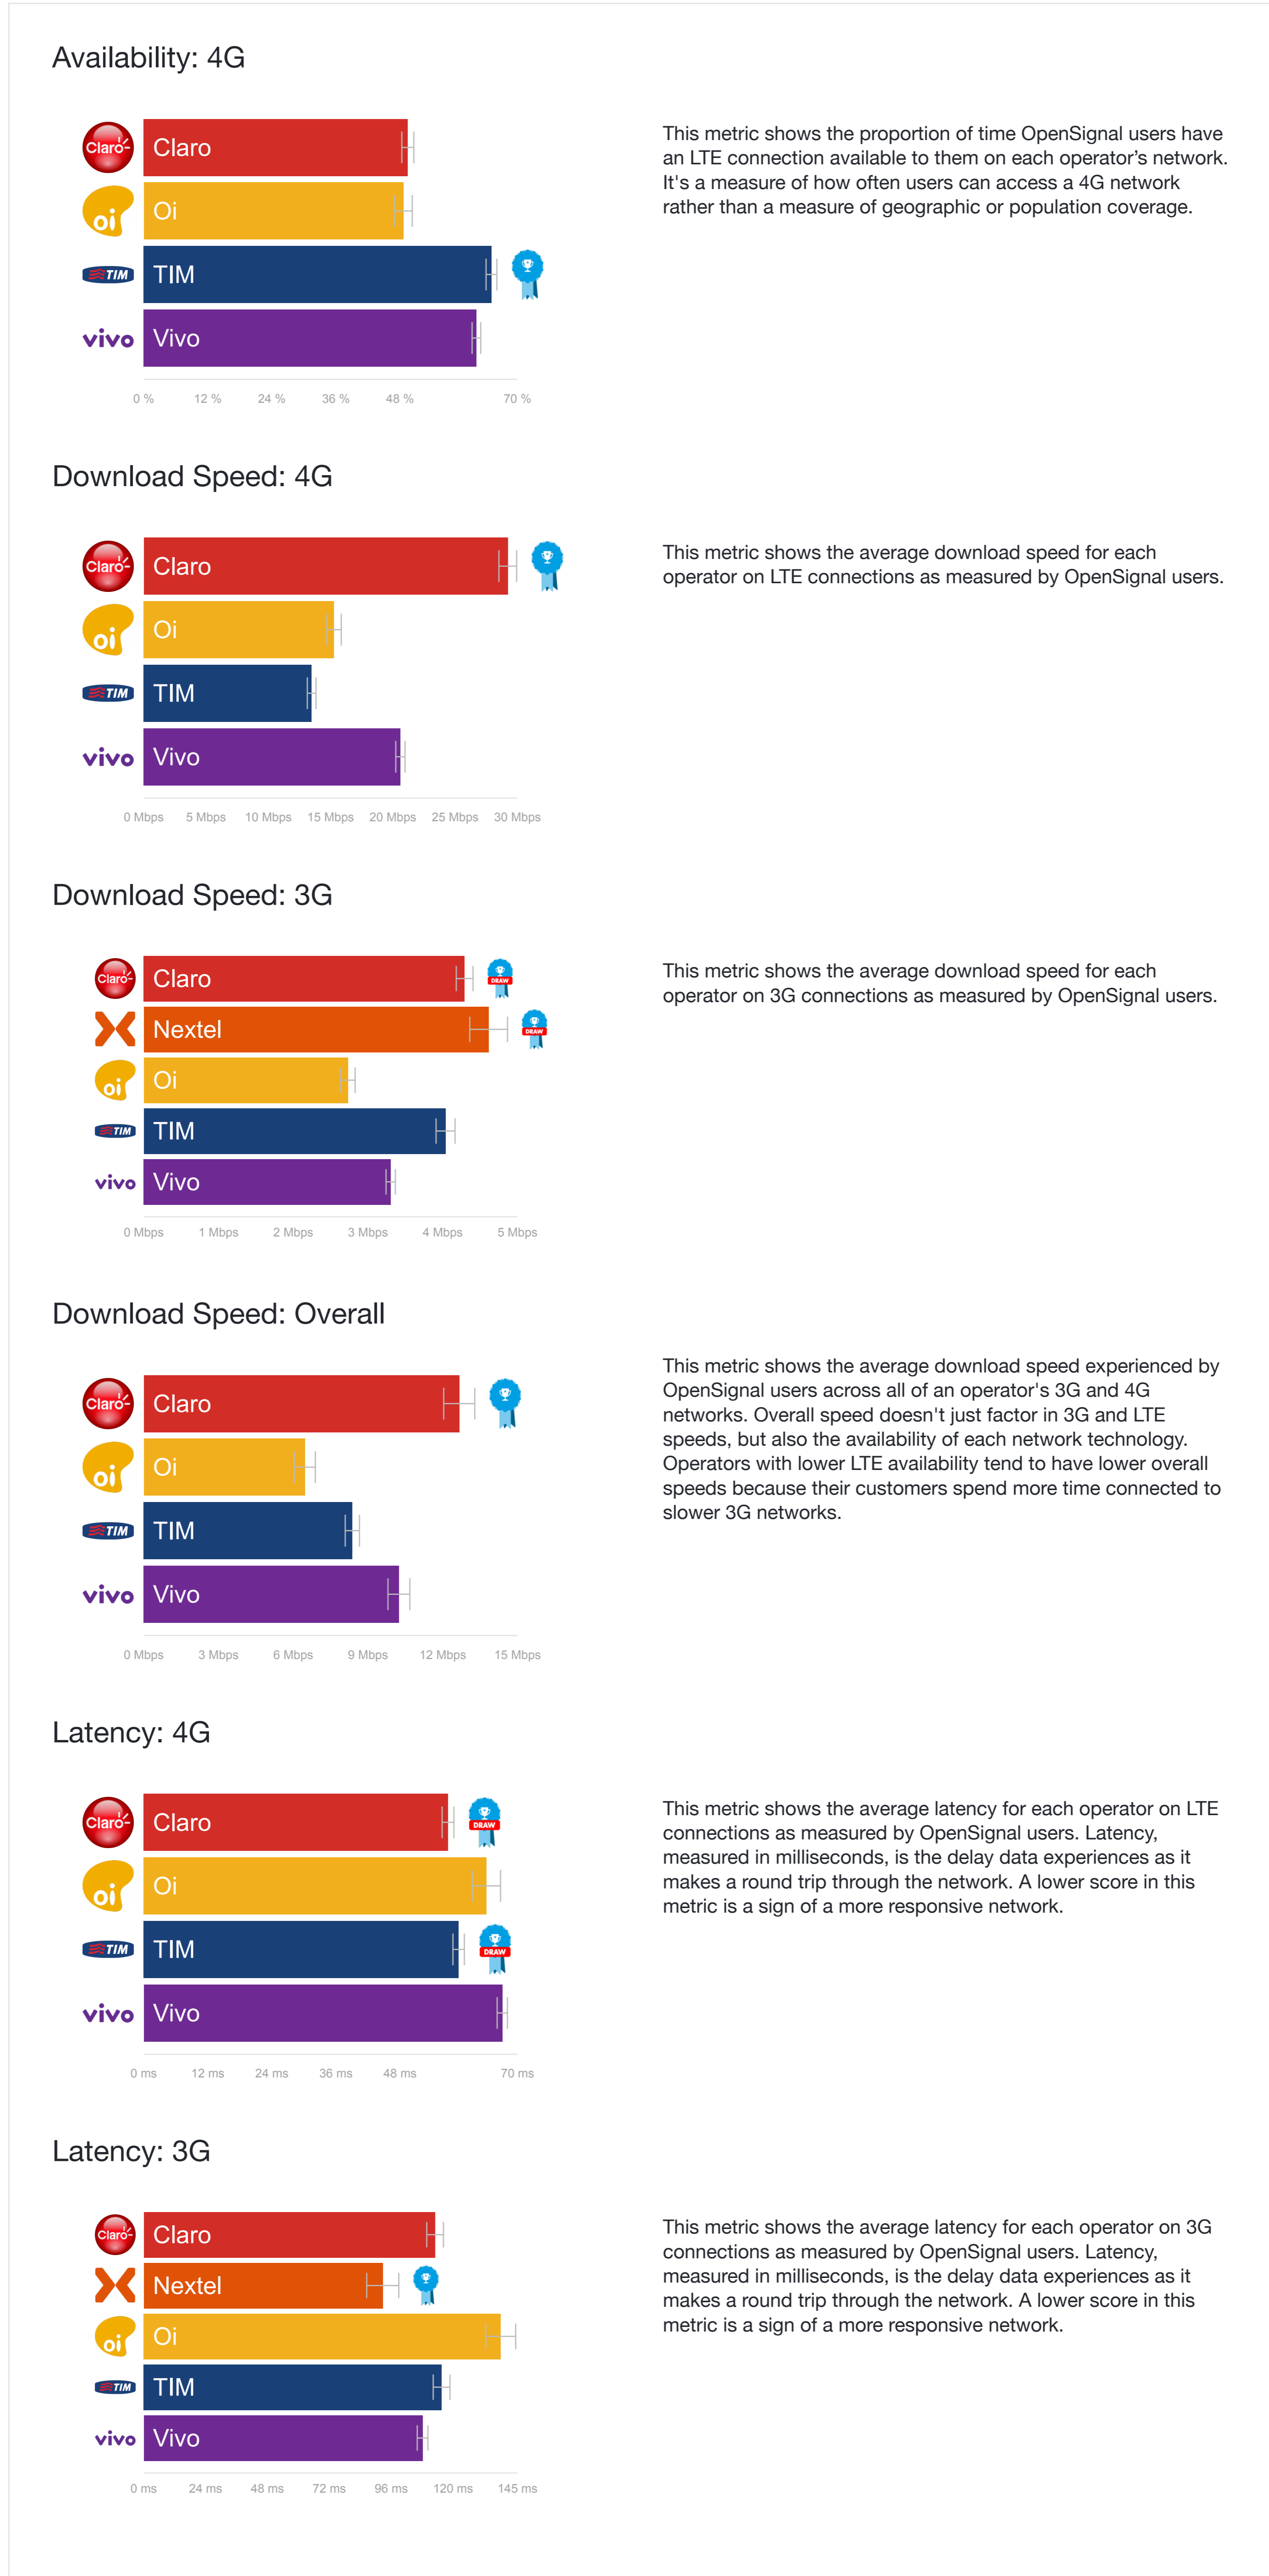

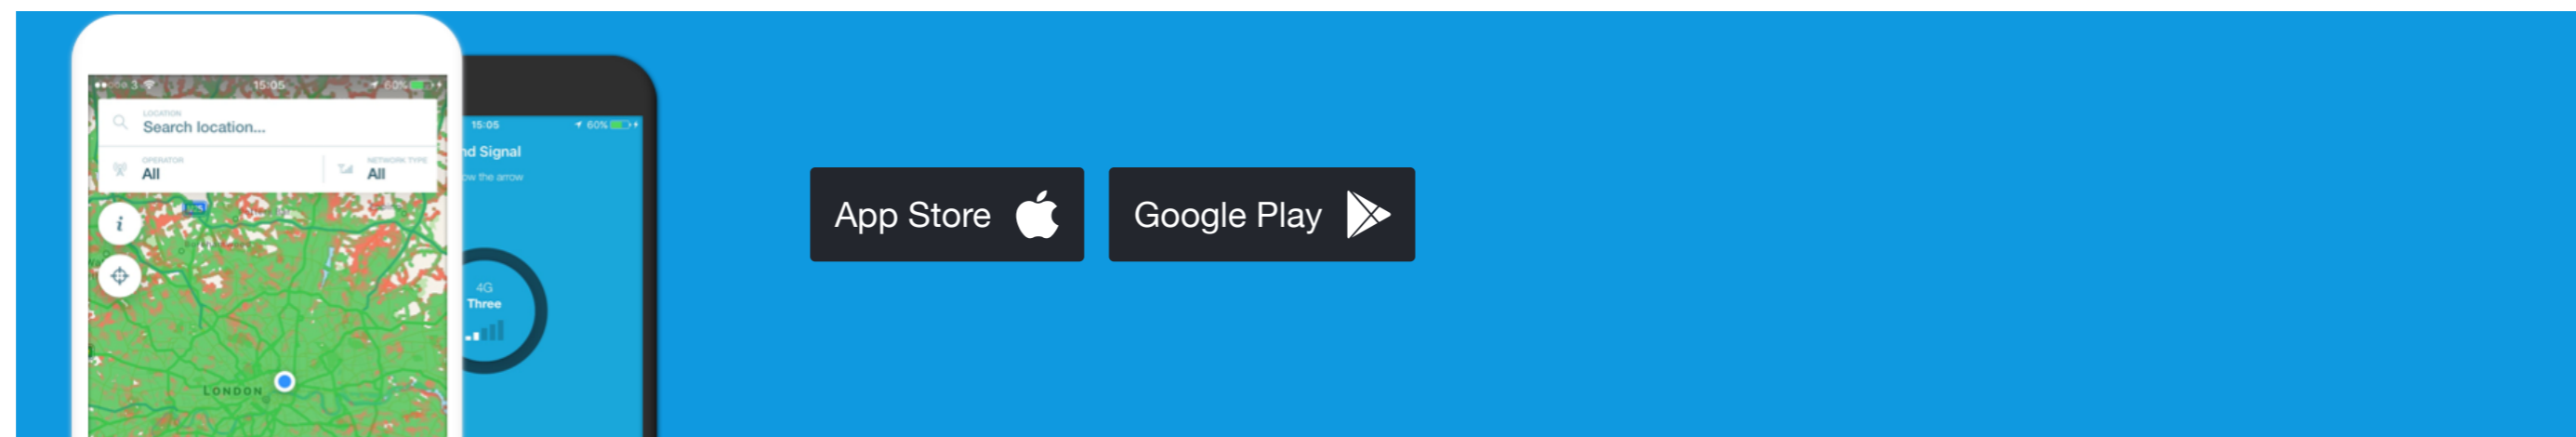

- 4G availability in Brazil is improving. In our last Brazil report no operator was able to deliver a 4G connection to our users more than 60% of the time. But in our most recent tests two operators, TIM and Vivo, had 4G availability scores greater than 62%.
- Claro was still the leader in 4G speed in our March-to-May test period, averaging download speeds of 29.2 Mbps, an improvement of nearly 2 Mbps since our last report. Vivo finished second in our 4G speed rankings with an average download of 20.6 Mbps, but both Oi and TIM scored below the global 4G speed average of 16.2 Mbps, as measured in our [State of LTE report](#).
- Nextel didn't factor into our LTE metrics as it only offers 4G service in São Paolo and Rio de Janeiro, but it rated highly in 3G speed, drawing with Claro for first place in our 3G download measurements.

## Report Facts

 <b>939,450,901</b> Measurements	 <b>40,717</b> Test Devices	 <b>Mar 1st - May 31st 2017</b> Sample Period	 <b>Brazil</b> Report Location
-------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------

## Awards Table

OpenSignal Awards	Download Speed: 4G	Download Speed: 3G	Download Speed: Overall	Latency: 4G	Latency: 3G	Availability: 4G
 Claro						
 Nextel						
 Oi						
 TIM						
 Vivo
